

# PPO Actor-Critic Neural Network Architecture

*for Autonomous Flight Control*

**Policy Network (Actor)  $\pi(a|s)$**

## Network Architecture:

- Input: 12-dim state vector (position, velocity, attitude, angular rates)
- Policy: 3 hidden layers [256, 256, 128] with ReLU activation
- Value: 3 hidden layers [256, 256, 128] with ReLU activation
- Output: Gaussian policy (mean + std) for continuous actions
  - Total Parameters: ~270k (Policy: ~135k, Value: ~135k)
  - Framework: Stable-Baselines3 PPO
